Class Day: Fridays

Hours: 9:00 – 12:00

Office Hours: Mondays

Hours: 9:00 – 12:00

Course Objectives

The objective of this second year course is to introduce students to the discussion and analysis of a number of Advanced Topics in Political Economy. Students will be exposed to a selection of topics that, whereas it is by no means exhaustive, will present them a panoply of current debates, mainly in the political economy of democracies, although the rise of authoritarianism in democracies and issues related to autocratic politics will also be discussed. Advanced academic research will be presented with the aim of expanding their analytical skills. The ultimate goal is to ensure that students understand, engage and can contribute to current research activity in the discipline.

Course Structure

The course has an advanced research seminar structure. There will be 2 to 3 required readings and some additional recommended pieces for every session. Students are expected to come to class having read the material and prepared to participate in every class discussion.

Course Evaluation

The grade of this course will be based on the individual performance of each student in the following four activities:

1. **Analytical assessment of the readings (20 %):** during 4 weeks each student is expected to provide a short (1-2 pages) assessment of the readings. Students will always

answer question A in their assessments and will choose between answering B and C afterwards:

A. What is the main contribution of the readings? To what extent it connects or departs from previous literature?

B. The empirical methods chosen in the readings? Why have the authors chosen them? Are there potentially better empirical approaches that the authors could have used?

C. What research project would you propose to move the research on this area forward?

The analytical assessment should consider all readings assigned, but it is possible to pay particular attention to a single reading.

2. **Class Participation (20 %):** Active class involvement is an important part of the success of this course. Students are expected to participate in class discussions, not only by presenting their ideas but by politely engaging with others’.
3. **Discussion Co-leaderships (20 %):** Once in the semester, each student will co-lead the class discussion with me (Amuitz). This means mastering the topic of that week – which might entail making additional readings and offering a broad overview of the topic –, guiding class discussion by preparing dynamizing questions, giving the floor to classmates, or reflecting upon future research avenues in that topic, among others.
4. **Final Paper (40 %):** Each student is expected to write a short research paper related to any of the topics covered in the course. The paper must: a) state a clear research question, b) motivate the importance of the question empirically, c) discuss the contribution of the paper relative to prior work, d) present a research design, e) report empirical analyses. These can be both descriptive and hypothesis testing. The last day of class (May 8th), students will present their paper project and receive feedback on it. The paper is due on the exam date.

COURSE SCHEDULE

Week 1 (January 31st): Culture in Historical Political Economy

The first three weeks introduce the concept of culture (origins, transmission, persistence, and change) as a valuable analytical asset for research. Increasingly, scholarship in economics and political science has focused on the role of culture as a means of persistence of bad outcomes (and, occasionally, good outcomes too!).

Week 8 (March 21st): The Non-Democratic Legacies of Democracies

Reflecting upon some of the previously discussed cultural and economic inequalities, the last three weeks of classes focus on the most acute challenges that democracies face nowadays: overcoming the various manifestations of existing authoritarian legacies, the constant need for effective representation, and the existing incentives for self-defeating strategies by elites.
